

Palmer/Pletsch

66" wide
22% Rayon/78% Polyester Weft

WIDER WIDTH FUSIBLE WEFT INTERFACING THAT WORKS!

PerfectFuse™ TAILOR *Ultra*

Great for jackets!

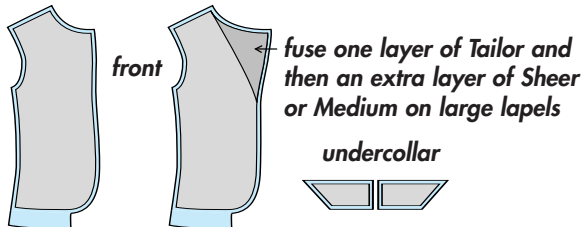

This weft interfacing has the hand of cashmere with a little gentle give in the crosswise direction making it very pliable and soft. As tailored jacket fabrics have become softer, lighter in weight, and drapier, this NEW PREMIUM QUALITY interfacing with its softer hand makes tailoring these fabrics EASIER.

- ◆ The resin system is unique in the world. You'll never see it on the right side of the fabric and it won't be stiff or boardy, making it ideal even on very fine woolsens.
- ◆ It's 66 inches wide, enough to fuse the full front on two jackets in most sizes.
- ◆ Crosswise stretch is compatible with stretch wovens.
- ◆ Preshrink if you're planning to wash the garment. If drycleaning, preshrinking is not necessary.
- ◆ Fuse for 14-16 seconds in each spot.

MAIN USES FOR PerfectFuse TAILOR

NOTE: We prefer to use a woven, non-fusible interfacing across the back. When a fusible is used here, the lower edge often shows on the outside, especially after cleaning.

NOTE: Leave interfacing in darts. Mark darts after fusing.
